

the RENEW lab

Researching Eating and Nutrition to Enhance Wellness

Principal Investigator:

- Nichole Kelly, PhD; Assistant Professor; Counseling Psychology and Human Services; Prevention Science

Project Description:

- The goal of the RENEW lab is to better understand the eating choices of children and adults. This information will help us devise programs to improve their eating habits and, in doing so, their health and well-being. We are seeking 2-4 research assistants to help with two separate studies, one examining the eating and exercise habits of pre-adolescent children (8-10 years old) living in rural Oregon, and one examining the disordered eating habits of young men using their smart phones.

Potential Benefits to Interns:

- Learn about individual, family, community and cultural factors associated with people's eating behaviors.
- Learn about biological factors – like body composition and heart rate variability – associated with people's eating behaviors.
- Gain valuable experience with clinical research – like how to recruit and retain research participants, the importance of keeping all study procedures standardized, etc.
- Learn about procedures for assessing body composition, eating behavior, and psychological functioning.
- This is an excellent opportunity for students interested in health, psychology, nutrition, and/or prevention science. Undergraduate research experience is vital for success with pursuing graduate school.

Student Time, Commitment and Requirements:

- Commit to volunteering the summer of 2018 and one full academic year (3 terms) in the RENEW lab.
- Commit to working 6-10 hours per week in the lab.
- Demonstrate exceptional professionalism, organizational skills, communication and dependability. We work with busy families who are taking time out of their day to participate in our research study. It is critical that we are on-time, prepared and courteous.

Application Procedure:

- Email therenewlab@uoregon.edu
- In your email, please note: 1) when you are able to start; 2) what experiences you have working with children in personal, clinical or research settings; and 3) what you hope to gain from working on this project.
- Please also include your currently availability spanning 9am-8pm for both weekdays and weekends.
- Qualified applications will be contacted for a follow-up interview.
